

Make careful AI-safety communication the easy default.

comm-ai-safety turns technical sources into fast, reviewable public communication—then keeps human approval and source fidelity as publication gates.

Portable skills make careful communication easier to repeat.

Bring your own harness

Use the AI or agent harness you already trust.

The package brings a repeatable communication workflow with it.

Package the judgment
Workflows, principles, references,
and templates travel together.

Move faster with gates
Draft early; verify evidence and get
human approval before
publication.

Keep one evidence spine
Public, press, and audit outputs
share the same claim boundaries.

The failure happens when evidence crosses audiences.

Technical result

A result is bounded by model, task, prompting, baseline, uncertainty, and caveats.

Public artifact

A release, post, visual, or demo must stay clear, useful, and faithful under compression.

Avoidable distortion

Capability becomes propensity; a model-only score becomes misuse uplift or deployment evidence; a demo becomes a misleading proxy.

reader belief

A useful draft comes early; publication checks stay strict.

1. Frame and draft

Name one audience and goal. Lead with one takeaway, up to two supporting claims, and a visible working-draft label.

2. Verify and approve

Check every load-bearing claim against primary sources. Then a responsible human approves the core evidence map.

3. Test and audit

Use reader teach-back, rapid checks during drafting, and a full, proportionate audit before publication.

working draft

verified evidence

publication decision

Three skills share one evidence-preserving handoff.

comm-public

Fast explainers, FAQs, social copy, visuals, and safer demo briefs for one named audience.
Audience copy stays separate from evidence and workflow notes.

comm-press

Working releases, briefs, pitches, and journalist FAQs with independent context, quote approval, and rights checks.

comm-audit

Rapid core-claim checks during drafting; full publication or corpus audits when risk and reuse justify them.

One enforceable rule

Drafts can arrive early. “Audited,” “final,” and “publishable” wait for human approval and resolved material findings.

Future plan

Expand to new audiences with human experts.

Next: add dedicated skills for policymakers and grantors; co-design and test them with human experts in communication, policy, funding, accessibility, and safety.

Ready to use

Install the skills. Start with the
worked demo. Make a public
claim easier to verify.
